processing elements connected in series, where the output of one element is the input of the next one. The elements of a pipeline are often executed in parallel or in time-sliced fashion. Some amount of buffer storage is often inserted between elements. Computer-related pipelines include: Instruction pipelines, such as the classic RISC pipeline, which are used in central processing units and other microprocessors to allow

Pipeline (computing) - Wikipedia

Simply speaking, a data pipeline is a series of steps that move raw data from a source to a destination. In the context of business intelligence, a source could be a transactional database, while the destination is, typically, a data lake or a data warehouse. The destination is where the data is analyzed for business insights.
