Vertebrates possess lineage-specific characteristics. These include paired anterior sense organs and a robust, modular head skeleton built of cellular cartilage and bone. All of these structures are derived, at least partly, from an embryonic tissue unique vertebrates - the neural crest. The evolutionary history of the neural crest, and neural crest cells, has been difficult to reconstruct. This volume will use a comparative approach to survey the development of the neural crest in vertebrates, and neural crest-like cells, across the metazoa. This information will be used to reveal neural crest evolution and identify the genomic, genetic, and gene-regulatory changes that drove them. Key selling features: Summarizes the data regarding neural crest cells and nerural crest derivatives Uses a broad-based comparative approach Suggests hypothesis that the origin of neural crest cells involved the novel co-activation of ancient metazoan gene programs in neural border cells Illustrates how the emergences of neural crest made possible the diversification of vertebrate heads

This book provides the reader with an introduction to the physics of complex plasmas, a discussion of the specific scientific and technical challenges they present and an overview of their potential technological applications. Complex plasmas differ from conventional high-temperature plasmas in several ways: they may contain additional species, including nano meter- to micrometer-sized particles, negative ions, molecules and radicals and they may exhibit strong correlations or quantum effects. This book introduces the classical and quantum mechanical approaches used to describe and simulate complex plasmas. It also covers some key experimental techniques used in the analysis of these plasmas, including calorimetric probe methods, IR absorption techniques and X-ray absorption spectroscopy. The final part of the book reviews the emerging applications of microcavity and microchannel plasmas, the synthesis and assembly of nanomaterials through plasma electrochemistry, the large-scale generation of ozone using microplasmas and novel applications of atmospheric-pressure non-thermal plasmas in dentistry. Going beyond the scope of traditional

plasma texts, the presentation is very well suited for senior undergraduate, graduate students and postdoctoral researchers specializing in plasma physics.

This book explores the politics of place marketing and the process of 'urban reinvention' in Berlin between 1989 and 2011. In the context of the dramatic socio-economic restructuring processes, changes in urban governance and physical transformation of the city following the Fall of the Wall, the 'new' Berlin was not only being built physically, but staged for visitors and Berliners and marketed to the world through events and image campaigns which featured the iconic architecture of large-scale urban redevelopment sites. Public-private partnerships were set up specifically to market the 'new Berlin' to potential investors, tourists, Germans and the Berliners themselves. The book analyzes the images of the city and the narrative of urban change, which were produced over two decades. In the 1990s three key sites were turned into icons of the 'new Berlin': the new Postdamer Platz, the new government quarter, and the redeveloped historical core of the Friedrichstadt. Eventually, the entire inner city was 'staged' through a series of events which turned construction sites into tourist attractions. New sites and spaces gradually became part of the 2000s place marketing imagery and narrative, as urban leaders sought to promote the 'creative city'. By combining urban political economy and cultural approaches from the disciplines of urban politics, geography, sociology and planning, the book contributes to a better understanding of the interplay between the symbolic 'politics of representation' through place marketing and the politics of urban development and place making in contemporary urban governance.

An eye-opening and fascinating slow travel journey from an acclaimed writer who circled the globe without ever leaving the ground. In this age of globalism and high-speed travel, Seth Stevenson, the witty, thoughtful Slate columnist, takes us back to a time when travel meant putting one foot in front of the other, racing to make connections between trains and buses in remote transit stations, and wading through the chaos that most long-haul travelers float 35,000 feet above. Stevenson winds his way around the world by biking, walking, hiking, riding in rickshaws, freight ships, cruise ships, ancient ferries, buses, and the Trans-Siberian Railway-but never gets on an airplane. He finds that from the ground, one sees the world anew-with a deeper understanding of time, distance, and the vastness of the earth. In this sensational travelogue, each step of the journey is an adventure, full of unexpected revelations in every new port, at every bend in the railroad tracks, and around every street corner.

An up-to-date comprehensive text useful for graduate students and academic researchers in the field of energy transfers in fluid flows. The initial part of the text covers discussion on energy transfer formalism in hydrodynamics and the latter part covers applications including passive scalar, buoyancy driven flows, magnetohydrodynamic

(MHD), dynamo, rotating flows and compressible flows. Energy transfers among large-scale modes play a critical role in nonlinear instabilities and pattern formation and is discussed comprehensively in the chapter on buoyancy-driven flows. It derives formulae to compute Kolmogorov's energy flux, shell-to-shell energy transfers and locality. The book discusses the concept of energy transfer formalism which helps in calculating anisotropic turbulence.

The Iron Kingdom: a half-mythical land conquered by barbarians an age ago, celebrated in song and legend. Here is a land of contrasts as beauty and savagery collide. The north-men, now savages no more, struggle to leave their brutal past behind as they strive to become more civilized and find peace. Yet, it remains a land of conflict ruled over by the Iron King, a mighty ruler, who is himself something of a legend. The king has grown old and the sun is setting on the days of his saga. Shadows grow long in the south, and Lord Garyth, a nobleman of doubtful lineage and agent of the crown is returning home. A celebrated warrior within the Iron Kingdom, Garyth is eager to get back to his home and family. However, he has discovered a shadowy plot that threatens the kingdom. Countless orcs gather under one banner in the mountains, their hungry eyes looking north, while worse creatures join them. War looms on the horizon, as some dark will seems to watch on in ravenous anticipation. To survive, the men of iron must once again fight against a seemingly overwhelming tide of darkness. This fight is not for land or wealth, this battle will be for their very survival.

Seabury Quinn was one of the most popular pulp authors of the early 20th century. Set in the aftermath of the Salem Witch Trials, 'Is the Devil a Gentleman?' is one of his best tales. Many of the demonic and thriller stories, particularly those dating back to the 1900s and before, are now extremely scarce and increasingly expensive. We are republishing these classic works in affordable, high quality, modern editions, using the original text and artwork.

Emily Crane doesn't want to die, but what she's been doing for the past seventeen years can't really be called "living," so when a tragic event cuts her teenage life short, she feels nothing for the loss. But when she awakens only hours later, very much alive and without a single injury on her body, she is thrust into an existence that she never thought possible. Confronted with government scientists, beautiful assassins, and secrets that may threaten every mortal on the planet, Emily's new life is suddenly more exciting, more dangerous, and more meaningful than she could have ever imagined. When Emily Crane dies, her life finally begins.

Serving a wizard who has transformed innumerable victims into monsters and other cursed forms and then imprisoned them in his castle, housekeeper Nussy faces a disastrous uprising when the wizard suddenly dies, leaving his victims to overwhelm everything in their paths.
