small engine. This new, expanded edition has been revised to include an important section on seasonal maintenance, and updated to include the latest engines, maintenance products, and tools.

This book is targeted at first level supervisors who want to become the best supervisor that their company has ever seen. It is based upon the author's 30 years of management experience. It covers all of the supervisory basics, utilizing tips, techniques and action items to lead the junior supervisor to success. The main feature of this book is that it cuts through all of the management philosophy and spells out, in specifics, what the supervisor needs to do to become an outstanding supervisor.

A comprehensive index to company and industry information in business journals.

Six years and 75,000 miles ago I bought a Harley and re-entered the world of motorcycles at the age of 55, and I have been having a blast ever since! I also have made every beginner mistake in the book. Wait a minute, what book? There is no beginner mistake book. Well, there is now and I wish I would have had it six years go. I wrote this book so you can cash in on my experiences and save yourself time, money and hassle. Crammed with beginner mistakes, tips, how-to's and resources, it has what every new or re-entry rider needs to know about riding and gear. It's got all of the stuff they didn't tell you about selecting a starter bike, minimizing risk, riding safety, using the `friction zone', going where you look, buying the right gear the first time and many more basic rider topics. It is easy to read, well organized and laced with a little off-beat humor to make it fun. The single best thing I did when I started riding was to

go through the MSF Basic Rider course. The next best thing I could have done would have been buying this book. Reading this book can minimize your learning curve and enable you to start really enjoying your motorcycle today.

A new approach for defining causality and such related notions as degree of responsibility, degrees of blame, and causal explanation. Causality plays a central role in the way people structure the world; we constantly seek causal explanations for our observations. But what does it even mean that an event C “actually caused” event E? The problem of defining actual causation goes beyond mere philosophical speculation. For example, in many legal arguments, it is precisely what needs to be established in order to determine responsibility. The philosophy literature has been struggling with the problem of defining causality since Hume. In this book, Joseph Halpern explores actual causality, and such related notions as degree of responsibility, degree of blame, and causal explanation. The goal is to arrive at a definition of causality that matches our natural language usage and is helpful, for example, to a jury deciding a legal case, a programmer looking for the line of code that cause some software to fail, or an economist trying to determine whether austerity caused a subsequent depression. Halpern applies and expands an approach to causality that he and Judea Pearl developed, based on structural equations. He carefully formulates a definition of causality, and building on this, defines degree of responsibility, degree of blame, and causal explanation. He concludes by discussing how these ideas can be applied to such practical problems as accountability and program verification. Technical details are generally confined to the final section of each chapter and can be skipped by non-mathematical readers.

Radar is a legal necessity for the safe navigation of merchant ships and, within vessel traffic services, is indispensable to the operation of major ports and harbours. Target Detection by Marine Radar

concentrates solely on civil marine operations and explains how marine surveillance radars detect their targets. A chapter has been devoted to the issue of accuracy. The various international regulations governing marine radar are examined, a brief historical background is given to modern-day practice and the book closes with a discussion of ways in which marine radar may develop to meet future challenges.
