Seminar paper from the year 2008 in the subject Business economics - Trade and Distribution, grade: 1,8, Leeds Metropolitan University, course: Strategic Services Management, 15 entries in the bibliography, language: English, abstract: Each business should have one major focus to be able to develop and satisfy the market needs. Obviously this focus is the customer. It does not matter who the customer is defined as he/she has to be defined for each company in a different way. The main thing is that all efforts are addressed to the customer. Every company sells products or services to customers so from a quality assurance point of view it is crucial to develop products in reference to market needs or customer needs respectively. This is the focus for the assignment. A general guideline for an efficient product development process should be created with the overall objective - customer centric product development combined with an improved internal workflow. Anderson et al (2006, p. 1) states that customer value proposition is one of the most widely used terms in business in recent years. So it is important that a company is able to help customers understand the superior value of the products or service offered. Under pressure to keep costs down, customers may only look at the price and so it is important to think about the customer value proposition but also the comparison to the competitors of a specific market environment. This should flow into this assignment as well. Another problem of product development is that in many companies it is rather influenced by opinions of different sales people then by facts and figures. According Annacchino (2007, p. 101) a lot of companies tend to make a mistake at the product definition step, so that the customer is not really involved in the product development process. In reference to the definition of customer-defined needs there are different ways: A company can use direct customer surveys to solicit feedback and to obtain i

Not all customers deserve your best efforts: In the world of customer centricity, there are good customers...and then there is pretty much everybody else. In Customer Centricity, Wharton professor Peter Fader, coauthor of the follow-up book The Customer Centricity Playbook, helps businesses radically rethink how they relate to customers. He provides insights to help you understand: Why customer centricity is the new model for success and product centricity must be ushered out How the ideas of brand equity and customer equity help us understand what kinds of compa-nies naturally lend themselves to the customer-centric model and which ones don't Why the traditional models for determining the value of individual customers are flawed How executives can use customer lifetime value (CLV) and other customer-centric data to make smarter decisions about their companies How the well-intended idea of customer relation-ship management (CRM) lost its way-and how your company can properly put CRM to use Customer Centricity will help you realign your performance metrics, product development, customer relationship management and organization in order to make sure you focus directly on the needs of your most valuable customers and increase profits for the long term. The empowered customer is here to stay. With a low tolerance for subpar experiences, they have no qualms in switching brands if disappointed, and expect companies to provide offers that are personally relevant to them. This requires a 360 degree customer-centric approach—fuelled by big data—that attempts to understand customer problems and deliver timely solutions. The ability to use customer journey mapping and real-time analytics to unlock actionable insights can provide a competitive edge. Knowledge about shifts in customer behaviour, preferred channels or social media sentiment helps companies to respond proactively and with the right message. It is complemented by an analysis of the new skills and workforce models, as well as the business models needed to succeed in the age of digital disruption.

Based on eight years of research visiting dozens of startups, tech companies and incumbents, Harvard Business School professor Thales Teixeira shows how and why consumer industries are disrupted, and what established companies can do about it—while highlighting the specific strategies potential startups use to gain a competitive edge. There is a pattern to digital disruption in an industry, whether the disruptor is Uber, Airbnb, Dollar Shave Club, Pillpack or one of countless other startups that have stolen large portions of market share from industry leaders, often in a matter of a few years. As Teixeira makes clear, the nature of competition has fundamentally changed. Using innovative new business models, startups are stealing customers by breaking the links in how consumers discover, buy and use products and services. By decoupling the customer value chain, these startups, instead of taking on the Unilevers and Nikes, BMW's and Sephoras of the world head on, peel away a piece of the consumer purchasing process. Birchbox offered women a new way to sample beauty products from a variety of companies from the convenience of their homes, without having to visit a store. Turo doesn't compete with GM. Instead, it offers people the benefit of driving without having to own a car themselves. Illustrated with vivid, in-depth and exclusive accounts of both startups, and reigning incumbents like Best Buy and Comcast, as they struggle to respond, Unlocking the Customer Value Chain is an essential guide to demystifying how digital disruption takes place – and what companies can do to defend themselves.

There has been a sea-change in the focus of organizations - whether private or public - away from a traditional product- or service-centricity towards customer-centricity and projects are just as much a part of that change. Projects must deliver value; projects must involve stakeholders, and Elizabeth Harrin and Phil Peplow demonstrate convincingly that stakeholders are the ones who get to decide what 'value' actually means. Customer-Centric Project Management is a short guide explaining what customer-centricity means in terms of how you work and its importance for project performance; using tools and processes to guide customer-centric thinking will help you see the results of engagement and demonstrate how things can improve, even on difficult projects. The text provides a straightforward implementation guide to moving your own business to a customer-centric way of working, using a model called Exceed and provides some guidance for ensuring that customer-centricity is sustainable and supported in the organization. This is a practical, rigorous and well-researched text. It draws on established models and uses the example of project implementation in a healthcare environment to demonstrate the impact of this significant way of thinking about value. The authors can't guarantee that the Exceed process will radically improve project success rates, and no process can. Adopting a customer-centric mindset and using the Exceed process to measure and monitor customer satisfaction will, however, help you move towards working with happier, more engaged stakeholders.

The Web has changed the game for your customers— and, therefore, for you. Now, CustomerCentric Selling, already recognized as one of the premier methodologies for managing the buyer-seller relationship, helps you level the playing field so you can reach clients when they are ready to buy and create a superior customer experience. Your business and its people need to be "CustomerCentric"—willing and able to identify and serve customers' needs in a world where competition waits just a mouse-click away. Traditional wisdom has long held that selling means convincing and persuading buyers. But today's buyers no longer want or need to be sold in traditional ways. CustomerCentric Selling gives you mastery of the crucial eight aspects of communicating with today's clients to achieve optimal results: Having conversations instead of making presentations Asking relevant questions instead of offering opinions Focusing on solutions and not only relationships Targeting businesspeople instead of gravitating toward users Relating product usage instead of relying on features Competing to win—not just to stay busy Closing on the buyer's timeline (instead of yours) Empowering buyers instead of trying to "sell" them What's more, CustomerCentric Selling teaches and reinforces key tactics that will make the most of your organization's resources. Perhaps you feel you don't have the smartest internal systems in place to ensure an ideal workflow. (Perhaps, as is all too common, you lack identifiable systems almost entirely.) From the basics—and beyond—of strategic budgeting and negotiation to assessing and developing the skills of your sales force, you'll learn how to make sure that each step your business takes is the right one.
