This book is a simplified study guide for the Electronic Health Record Specialist Exam. Concise and straight to the points that the student needs for the test

The NHA Electronic Health Records Specialist Certification Exam aims at assessing the competencies of the Electronic Health Records Specialist. The exam tests the knowledge and abilities to effectively manage medical records in different healthcare settings. The exam has 100 multiple-choice items covering: Demonstrate knowledge of the health care delivery system and medical terminology. Demonstrate an understanding of the transition to an Electronic Health Record (EHR). Demonstrate the ability to maintain an EHR within a physician's office. Demonstrate the ability to maintain an EHR within a hospital setting. Demonstrate an

Get Free Ehr Certification Study Guide

understanding of the usage of personal health records. Demonstrate knowledge of compliance and ethics. Demonstrate an understanding of the Practice Partner (the ambulatory EHR). Many CEHRS candidates are experienced professional who have been in the field of electronic health record management for years, that they know most of the practical how-tos, and all they need is to learn the principles, concepts and science that are behind the essential exam topics. This Exametrix Pocket Notes condenses most necessary facts found in the exam into an easy-to-carry pocket guide. A quick, portable study tool designed to be quick, convenient and less overwhelming. Also a great tool to use for last-minute cramming.

The Certified Electronic Health Records Specialist CEHRS is a professional who has the duty of maintaining the integrity and protecting the privacy/security of all patient information. There are questions on technology, procedures and legal compliance. We create these self-practice test questions referencing the concepts and principles currently valid in the exam. Each question comes with an answer and a short explanation which aids you in seeking further study information. For purpose of exam readiness drilling, this product includes questions that have varying numbers of choices. Some have 2 while some have 5 or 6. We want to make sure these questions are tough enough to really test your readiness and draw your focus to the weak areas. Think of these as challenges presented to you so to assess your comprehension of the subject matters. The goal is to reinforce learning, to validate successful transference of knowledge and to identify areas of weakness that require remediation. The questions are NOT designed to “simulate” actual exam questions. “realistic” or actual questions that are for cheating purpose are not available in

procedures addresses affective (behavior-based) MAERB competencies to provide example-driven teaching and learning tools.

This User ' s Guide is intended to support the design, implementation, analysis, interpretation, and quality evaluation of registries created to increase understanding of patient outcomes. For the purposes of this guide, a patient registry is an organized system that uses observational study methods to collect uniform data (clinical and other) to evaluate specified outcomes for a population defined by a particular disease, condition, or exposure, and that serves one or more predetermined scientific, clinical, or policy purposes. A registry database is a file (or files) derived from the registry. Although registries can serve many purposes, this guide focuses on registries created for one or more of the following purposes: to describe the natural history of disease, to determine clinical effectiveness or cost-effectiveness of health care products and services, to measure or monitor safety and harm, and/or to measure quality of care. Registries are classified according to how their populations are defined. For example, product registries include patients who have been exposed to biopharmaceutical products or medical devices. Health services registries consist of patients who have had a common procedure, clinical encounter, or hospitalization. Disease or condition registries are defined by patients having the same diagnosis, such as cystic fibrosis or heart failure. The User ' s Guide was created by researchers affiliated with AHRQ ' s Effective Health Care Program, particularly those who participated in AHRQ ' s DEcIDE (Developing Evidence to Inform Decisions About Effectiveness) program. Chapters were subject to multiple internal and external independent reviews.
