As a teacher, what you want most is for your students to learn—to immerse themselves in rich and challenging content and leave your classroom better prepared for school and life. In English language arts and humanities, this includes developing the multifaceted reading, writing, thinking, and communication skills that constitute next generation literacy, including the ability to * Read complex text independently * Develop strong content knowledge through reading, writing, listening, and speaking * Tailor communication in response to different audiences, tasks, purposes, and disciplines * Comprehend text as well as critique it * Value evidence in arguments they read, hear, or develop * Use technology strategically and capably * Understand perspectives and cultures that differ from their own But as a teacher, you also know how much is riding on THOSE TESTS—achievement tests from the national assessment consortia, the SAT and ACT, and independent state assessments. Is it possible to help students succeed on mandated tests without sacrificing your values, your creativity, and their education? Yes, it is possible. This book shows you how. This not a test-prep book. It is not about “drill and kill” practices that narrow learning so that students will pass an exam. Instead, authors Maureen Connolly and Vicky Giouroukakis present a lesson planning approach for the secondary classroom that generates test success as a byproduct of comprehensive literacy learning. After a comparative analysis of how current ELA assessments measure literacy, they model a backward design-based process for using these test items as a tool to create engaging and effective instruction. With 6 sample lessons, 42 instructional techniques, and tips for differentiation, this practical resource will empower you to help the students you love become capable, literate individuals who are also well-prepared to ace high-stakes tests.

This open access book identifies the multiple ways that IEA studies of civic and citizenship education have contributed to national and international educational discourse, research, policymaking, and practice. The IEA International Civic and Citizenship Education Study (ICCS), first conducted in 2009, was followed by a second cycle in 2016. The project was linked to the earlier IEA Civic Education Study (CIVED 1999, 2000). IEA ICCS remains the only large-scale international study dedicated to formal and informal civic and citizenship education in school. It continues to make substantial contributions to understanding the nature of the acquired civic knowledge, attitudes, and participatory skills. It also discusses in-depth how a wide range of countries prepare their young people for citizenship in changing political, social, and economic circumstances. The next cycle of ICCS is planned for 2022. In this book, more than 20 national representatives and international scholars from Europe, Latin America, Asia, and North America assess how the processes and findings of the 2009 and 2016 cycles of ICCS and CIVED 1999/2000 have been used to improve nations' understanding of their students' civic knowledge, beliefs, attitudes, current civic-related behaviors, and intentions for future participation in a comparative context. There are also chapters summarizing the secondary analysis of those studies' results indicating their usefulness for educational improvement and reflecting on policy issues. The analyses and reflections in this book provide timely insight into international educational discourse, policy, practice, and research in an area of education that is becoming increasingly important for many societies.

Finnish pupils' success in international student assessment tests is a hot topic everywhere in the world. The significance of Finnish educational policy and society are continuously discussed. This book provides explanations, answers and reflections to these questions. Over 30 expert authors have contributed to this book by bringing their own specific research-based viewpoints to these issues. The book describes the wholeness of the Finnish educational system, on both structural and administrative levels. It introduces the framing factors and societal conditions of education in Finland. It also explains how the Finnish educational system and teacher education function in everyday life. The book illustrates how teaching and learning of different subjects is realized in Finnish schools, and describes the essential characteristics and methods of teaching, learning materials and research on these issues. The book provides important insight and reflections to international researchers, teachers, students, journalists and policy makers, who are interested in teaching and learning in Finnish schools. It shows the results of the systematic and persistent work that has been done on education and schooling in Finland. The main features of education in Finland: - Strong equity policy - Teachers as autonomous and reflective academic experts - Flexible educational structures and local responsibility for curriculum development/Evaluation for improvements, not for ranking - No national testing, no inspectorate - Research-based teacher education - Teachers' high competence in content knowledge and pedagogy - Trust in education and teachers
