Living Dinosaur Search Mokele Mbembe

4.0 out of 5 stars A Living Dinosaur: In Search of Mokele-Mbembe Reviewed in the United States on July 2, 2001 I read the book, and I liked it because Dr. Mackal is very conservative scientist, and he has lots of courage. He just looked at eye-witnesses and weighted the evidence.

A Living Dinosaur?: In Search of Mokele-Mbembe: MacKal

The region is the reputed home of the mokele-mbembe, an amphibious dinosaur-like creature said to be up to 35 feet long, with brownish-gray skin and a long, flexible neck. According to legends, it...

Mokele-Mbembe: The Search for a Living Dinosaur | Live Science

During the 1980s, Mackal turned his attention to another legendary creature, the Mokele-mbembe, an alleged living dinosaur in the Likouala swamp region of the Republic of Congo. Accompanied by University of Arizona ecologist Richard Greenwell and Congolese biologist Marcellin Agnagna, Mackal undertook two expeditions, the first in 1980 and the second in 1981, to find and photograph the creature.

by David Catchpole. Composition by Steve Cardno, photo of dinosaur model by Allen Browne. Over the past 100 years, there have been many reports of sightings, in a remote area of central Africa, of a swamp-dwelling animal known to local villagers as ‘mokele-mbembe’—the ‘blocker-of-rivers’. 1, 2, 3, 4, 5, 6, 7 It is described as living mainly in the water, its size somewhere between that of a hippopotamus and an elephant, but with a squat body and a long neck that enables it to ...

Mokele-mbembe: a living dinosaur? - creation.com

For over 2 hundred years there have been reports of a living dinosaur in Africa. This creature, which the natives call "Mokele-Mbembe" is believed to be a sauropod type of dinosaur. Sauropod means "Lizard-Footed" dinosaur. Sauropods are four-legged, herbivorous dinosaurs. These incidents were reported long before the word "dinosaur" was coined, and long before anyone (in this century) knew they existed.
